# SecurityGate™

Configurable Module Builder

With a library of over 4,000 questions and the ability to assign custom attributes to each, users have all the resources to develop their own cyber assessments unique to their needs

Build custom modules with ease

No need to wait months and years as with other platforms to adapt to your needs. Out of the box abilities enable you to specify requirements and create actionable workflows immediately.

Create custom questions & attributes

Draw additional insights from your assessment data with custom attributes. Create up to 3 custom attribute categories and fill in the corresponding information.

Save, edit, and assign Modules to entities

Each module acts as a template that can be saved, edited, and assigned to entities as an assessment. Make any modifications you'd like and schedule your next assessment.
